

300 mm

We strategically focus on producing wafers of this diameter.

Siltronic produces

2 m²

wafer area per minute.

2,000

different customer specifications are served by Siltronic.

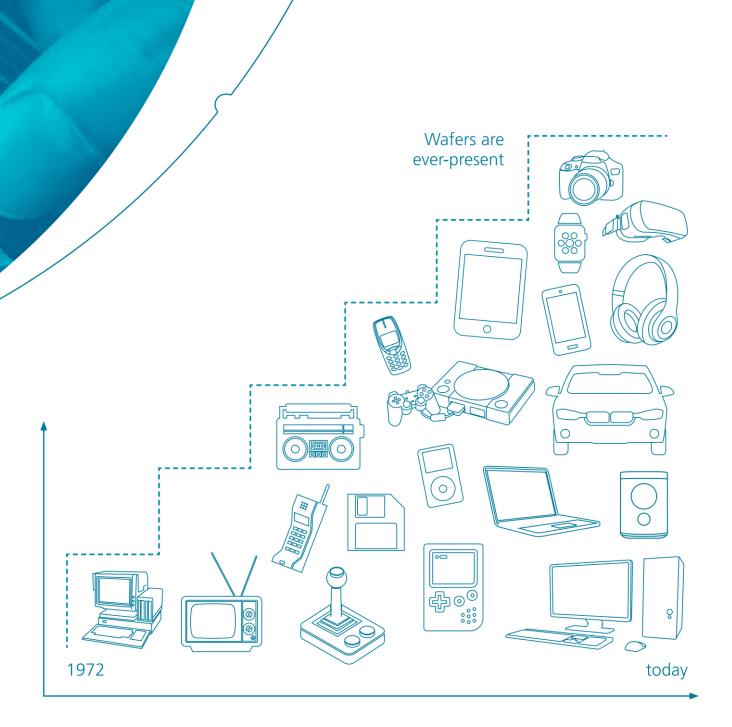

What originally began in 1953 with the development of hyperpure silicon reached an initial peak in 2015 with the successful IPO.

Today we are one of the global market leaders in the semiconductor industry and a technology leader in the development and production of highly specialized silicon wafers. Internationally positioned and strategically near to our customers, we consequently focus on quality, innovation, efficiency and precision. With our international production footprint in Asia, Europe and the USA we serve the quality-oriented semiconductor industry worldwide and partner with all leading chip companies.

With various diameters, material properties, and special surface qualities, our extensive product range covers the global semiconductor industry's specific requirements. We value the close relationship with our customers. Joining forces, we engage in a process-based approach to develop solutions for tomorrow's advanced requirements. Some 1,700 patents and patent applications underscore our outstanding innovative strength.

We maintain a global network of manufacturing facilities in Asia, Europe and the USA. All sites are strategically close to our customers and have access to extremely well trained workforces.

Munich

Siltronic AG is headquartered in Munich.

Burghausen

At the largest chemical site in Bavaria, Siltronic's success story began in 1953 with the production of the first hyperpure silicon crystal, with a diameter of just 10 mm. Today, monocrystals are pulled and silicon wafers with diameters up to 300 mm are manufactured for customers across the globe.

The core of the company's innovation capabilities is also at home in Burghausen: our central research and development department is working on the further optimization of products, processes, and measurement methods in order to be one wafer generation ahead.

Freiberg

Our site in Saxony traces its origins back to nationally owned Spurenmetalle Freiberg founded in 1957. Today this is the largest 300 mm fab in Europe. The site is one of the largest employers in the region. Situated close to the high-tech location Dresden, today's Siltronic Freiberg is part of Saxony's "Silicon Valley" and one of the founding members of one of Europe's largest industry networks, Silicon Saxony e.V.

Singapore

Our largest and most advanced leading-edge production capacities are concentrated in the Singapore site. Drawing on sophisticated information and automation technology, the facilities produce wafers with single wafer history tracking.

In 1997, Siltronic Singapore Pte. Ltd. started with the production of 200 mm wafers for the Asian market.

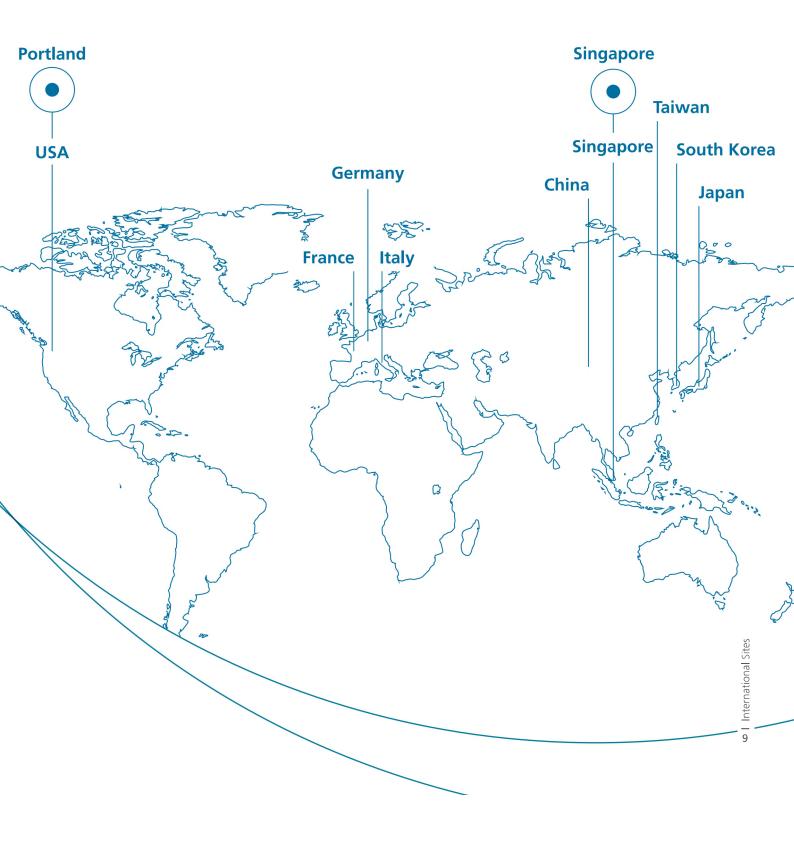

In 2007 Siltronic Silicon Wafer Pte. Ltd. was founded and started production of 300 mm wafers and 300 mm ingots at this site. Now our wafers produced in Singapore are delivered to customers worldwide.

Portland

The production facilities in Portland, Oregon, USA were founded in 1979 and were Siltronic's first international site. While the site originally supplied the American market, it by now delivers 200 mm wafers for the world market. Leading institutions and environmental organizations have multiply awarded Siltronic Portland for its commitment to environmental protection, resource management and sustainability.

Sales Offices

We serve our customers worldwide with sales offices in Europe, the USA and the Asian region. Key account teams, composed of employees from sales & marketing, application technology, process engineering, quality management, and logistics, maintain close relationships with our key customers and deliver a first-class customer service.

Quality management

Environmental management

Occupational health and safety management

Founded in Germany, at home in the world: Today we are a global employer in which employees around the world place their trust and loyalty.

If you asked the roughly 4,000 Siltronic employees worldwide for a good reason to work for Siltronic, you would get roughly 4,000 good reasons. They value the good cooperation and the corporate culture, which has been founded on trust and appreciation. Flexibility and initiative are important to us. We have firm principles and mission statements and have compiled these in our Code of Teamwork & Leadership. This code determines our daily work and shapes the cooperation at all company levels.

Further information about job opportunities are published on our homepage at **www.siltronic.com**

1 | Trust and appreciation

2 | Performance, results and success

3 Recognition, feedback and development

4 | Teamwork, diversity and equal opportunity

5 | Challenges, mistakes and changes

6 | Work-Life balance

7 | Managers as role models

We conduct our planning with resource conservation in mind and we integrate factors such as product and production safety as well as health and environmental protection into all business processes right from the start. We consequently comply with the key ideas of the chemical industry's initiative Responsible Care®. We also follow the principles of the United Nations Global Compact and regard ourselves as suppliers to the electronics industry committed to adhering to the RBA (Responsible Business Alliance, formerly known as the EICC Electronic Industry Citizenship Coalition).
